

Harris Poll: Vast Majority Say Chiropractic Effective for Athletes

81%

81% of Americans believe chiropractic care is effective for athletes, both professional and amateur

49%

Nearly 1 in 2 (49%) said chiropractic was “very effective” to “restore joint function and support the neuromusculoskeletal system” of athletes

88%

88% of Millennials surveyed said chiropractic was very/somewhat effective for athletes

0%

Gender, income and education levels have no bearing on perception of chiropractic care

Consumer opinions mirror those of many athletes, especially those who compete for a living. As evidence, all teams in the NFL, as well as the majority in the MLB and NBA, and many U.S. Olympians, have doctors of chiropractic (DCs) as part of their multidisciplinary training and medical staff.

People of different backgrounds have similar positive perspectives of chiropractic care.

About the Survey

The survey was conducted online within the U.S. by The Harris Poll on behalf of the Foundation for Chiropractic Progress from January 21 – 23, 2020, among 2,015 U.S. adults ages 18+. This online survey is not based on a probability sample and therefore no estimate of theoretical sampling error can be calculated. For the complete survey methodology, including weighting variables, please contact Megan Gilson at megan@f4cp.com.
